

GUIDELINES FOR INSTALLING THE FOLLOWING SIGNS:

"Horse and Rider Crossing" sign (W11-7)

Upon written request and as determined by the Engineer, this sign may be erected at locations where horses and riders frequently use bridle paths to cross state roads. Some typical locations where signs may be installed are accident locations, riding schools, and sight distance restrictions where ~~the~~ bridle path can not be relocated to provide adequate visibility. This sign is not intended to be used to warn of horses being ridden along the shoulder of the roadway and normally would not be installed in subdivisions, or on dead end roads and unpaved roads due to slow speeds and local traffic. *Consideration of the engineering study may include; but not limited to: traffic volumes, approach speeds, street width, sight distance, and frequency of crossings, road geometry, and accident history.*
